The detailed RDA-FRAD Mapping supplements the general statements that are made in section 1.3 of the RDA Scope and Structure document about the relationship between RDA and FRAD. It shows how each RDA element relates to the attributes and relationships defined in FRAD.

RDA-FRAD Mapping

The attached table provides a mapping of elements, element sub-types, and sub-elements specified in RDA to the corresponding entity and associated attribute or relationship defined in FRAD.¹

Elements listed under sections that will not be developed until after the initial release of RDA in 2009 are shaded.

The following symbols are used in the table:

- + Indicates that there is an attribute or relationship defined in FRAD that corresponds to one or more aspects of the RDA element, but that the RDA element is broader in scope. For example, FRAD defines relationships between a person and a corporate body, and between one corporate body and another, but not between a family and a corporate body. The RDA element defined for Related corporate body includes relationships between a family and a corporate body as well as those between a person and a corporate and between one corporate body and another.

- n/a Indicates that there is no attribute or relationship defined in FRAD that corresponds either directly or indirectly to the RDA element.
